CeboStyle Antico

Water-based acrylic finish for interiors, washable, covering, with a pearly appearance. It allows you to obtain surfaces with particular light contrasts, such as to enhance both classic and modern environments. CeboStyle Antico can be used on all types of supports, appropriately prepared, and is available in a wide range of ready-made bases, to satisfy all chromatic needs and the various types of pearly appearance:

- Silver, Silver **ACTIVE** and Bases: pearly and shiny effect.
- Silver XL, Silver XL **ACTIVE**: pearly, shiny and structured effect.
- Golden White, Golden Orange: pearly and iridescent effect.

CeboStyle Antico

PLATINUM

Water-based acrylic finish for interiors, washable, covering, with a pearly and satin appearance. It allows you to obtain surfaces with particular light contrasts, such as to enhance both classic and modern environments. CeboStyle Antico Platinum can be used on all types of supports, appropriately prepared.

CeboTime

Water-based acrylic finish for interiors, with low dirt pick-up and high mechanical resistance. With a matt and delicately pearly appearance, easy to apply, it allows you to obtain light, sharp and luminous colours, but also very intense shades. The multiple color possibilities make CeboTime a versatile and easily usable finish for enhancing both classic and modern environments. Can be used on all types of appropriately prepared supports.

ACTIVE Line

All the finishes in the **ACTIVE** version are enriched with silver ions and combine the technical and aesthetic qualities of the products with a bactericidal and bacteriostatic function.

ACTIVE PROTECTION AGAINST MOLD AND BACTERIA

Eliminates over 99% of bacteria present on treated surfaces. (tests carried out according to ISO 22196:2011)

Silver: uses and historical notes

Since ancient times, silver has been known for its antibacterial, antifungal, antiviral and disinfectant properties. Considered a universal remedy, it was widely used in Chinese, Egyptian, Roman and Persian medicine. The aristocrats of Ancient Greece and the Romans used silver crockery and utensils on a daily basis, aware that this noble metal could keep diseases away and that, in the event of ingestion of small parts, they would not run any risk: hence the phenomenon known as "argyriasis", or the famous legend according to which the blood of nobles is blue. In the late 1800s and subsequently around 1910-1920 we began to have the first documented evidence in medical journals of the use of colloidal silver and its effectiveness in killing bacteria.

Properties and benefits of the ACTIVE Line:

Silver is by its nature antimicrobial, completely non-toxic and is used to prevent the development of bacteria even in healthcare environments.

All the products of the **ACTIVE** Line are enriched with silver ions, which perform a long-lasting bactericidal and bacteriostatic function. The active protection of the silver ions inhibits the bacteria that settle on the walls, preventing their spread and the consequent formation of mold.

The products of the **ACTIVE** Line are also free from formaldehyde and have a low content of VOC.

ACTIVE Line products

THE WALL FINISHES:

CeboLife ACTIVE: Opaque water-based wall paint with high washability and coverage, for interiors, enriched with silver ions.

CeboTop Lak ACTIVE: Wall hydroenamel, based on styrene acrylic resin, with excellent characteristics of resistance to washing, coverage, whiteness and reduced dirt pick-up, enriched with silver ions.

Available in Satin and Matt versions.

THE DECORATIVE FINISHES:

CeboStyle Antico ACTIVE: Metallic finish with high washability, mechanical resistance and reduced dirt pick-up, for interiors, enriched with silver ions. Available in Silver and Silver XL and Platinum bases.

CeboTime ACTIVE: Water-based acrylic finish for interiors, with a pearly and matt appearance, enriched with silver ions.

CeboSpark

Water-based interior finish with a matt appearance that allows you to create decorations with a high aesthetic impact. Thanks to the ease of application, it is particularly suitable for decorating large surfaces. CeboSpark is presented in a wide range of colors combined with the CeboMagic paste additive, which enhances and embellishes the decorated surfaces by alternating the matt appearance of the finish with the sparkle of the reflected light.

CeboKing

MULTI-SUPPORT FINISH

CeboSkil

TRANSPARENT PROTECTIVE
(HACCP)

CeboKing is a water-based multi-support finish, based on polyacrylic resin, for interiors and exteriors, applicable directly on different supports (suitably prepared) such as metal, plastic, wood, plaster walls, plasterboard and concrete and ceramic surfaces.

CeboKing boasts high mechanical and washing resistance, excellent coverage and whiteness. The use of CeboKing on concrete, wood and ceramic floors is recommended for residential use only.

CeboSkil is a transparent, water-based, two-component protective finish, based on polyacrylic resin, for interiors and exteriors available in the versions: Glossy - Satin - Matt.

Catalyzed CeboSkil has excellent washability and mechanical resistance characteristics and is certified for use in environments with the presence of food (HACCP).

CeboStone Flash and CeboStone Light

CeboStone Light and CeboStone Flash are two water-based acrylic finishes for interiors. Quick and easy to apply, with high mechanical resistance, they give the surfaces a sandblasted and luminous effect. They can be used on any type of substrate, both plaster and civil. CeboStone Flash features a shiny, shimmering metallic look, while CeboStone Light features a subtle, matte metallic look.

To make the two finishes washable, we recommend the application of CeboVitra Più, a water-based transparent glossy protector.

CeboSfera

Water-based decorative coating for interiors based on acrylic resin, glass spheres and metallic pigments. The ease of application allows you to create multiple processes: from the delicate shades of spatula work to material effects rich in light and dark. The walls decorated in this way are characterized by brightness and depth of design, making each room precious and unique.

CeboSi Decoro

Water-based acrylic stucco for interiors, washable, enriched with precious metallic pigments. It allows you to create elegant decorations with particular reflections typical of gold and silver. CeboSi Decoro can be applied to all flat and smooth surfaces. It is offered in a series of refined ready-made bases: **Silver**, **Venetian Gold**, **Pure Gold**, which can be colored with CeboKit or CeboCol system.

The background of the advertisement is a wall with a light blue and white marbled pattern, featuring thin, flowing veins of blue and teal. In the lower-left foreground, a dark grey, ribbed vase holds several dried, spiky plant stems. Next to it is a smaller, metallic, textured vase with a gold-colored rim. Both vases sit on a light blue rectangular surface.

CeboMarmo

THE SHINING STONES

High-quality water-based acrylic finish for interiors, with a glossy appearance. CeboMarmo reinterprets the marble effect by reproducing the movements of the typical veins and the brilliance of a precious and refined material, giving an exclusive charm to every environment.

CeboModern on CeboIdea

CeboModern is a foil-effect interior finish that recalls the beauty and shine of polished metals. The particular reflections and plays of light make CeboModern the ideal solution for innovative interior design projects with a contemporary flavour.

CeboSi Universal AS

Water-based acrylic-siloxane finish for interiors and exteriors, washable, semi-covering. It allows you to create refined glazes and shaded effects, with a deeply opaque appearance. All plaster and civil substrates are suitable, if suitably prepared. The application of CeboSi Universal AS on the different types of base proposed allows the creation of multiple decorative effects.

CeboStone CeboStone AS

Water-based finishes for interiors and exteriors: their particular structure, with a grain size of 0.3 mm, allows the creation of matt finishes characterized by delicate chiaroscuro, obtained by alternating sandier and smoother areas. The two finishes are applied in a single coat on a suitably prepared base, thus resulting in an effective solution for decorating large surfaces, both in residential and commercial contexts.

A photograph of a modern interior. A large wall panel with a dark, rusted metal texture (OXYDIA) is the central focus. On top of the wall are a black wireframe cage with a cactus, two black ceramic vases, and a framed abstract artwork. In the foreground, a wooden armchair with a grey upholstered seat and backrest sits on a light wood floor. To the right, a small round wooden table with black legs is partially visible.

OXYDIA

It is inspired by the corrosive force of time on matter, the decorative effect that allows the tactile and visual appearance typical of oxidized metals to be reproduced on surfaces. Thanks to the skilful combination of colours, the walls come alive with metallic flashes and shades of colour, giving life to creations full of personality and character.

OXYDIA – DESIGN – LAMINA: three effects that differ from each other due to the materiality of the textures.

CEMENTO

by CeboArt Pozzolano

Mineral coating based on lime and marble powders. Thanks to its application flexibility, CeboArt Pozzolano lends itself to the creation of surfaces that imitate the appearance of concrete. It is therefore ideal for creating environments with a minimalist and modern style in any type of context, public or private.

Lime-based material decorative coating for interiors, which allows you to carry out classic and uniform processes or innovative destructured and material solutions. Color variants come together in a collection of effects with a classic soul but a contemporary approach to celebrate a new way of living.

CEBOART, LIME COATINGS

CeboArt Pozzolano and CalceFine

Mineral decorative coatings, for interiors and exteriors, based on slaked lime and fillers such as calcium carbonates, carefully selected marble and siliceous sands. CeboArt Pozzolano and CeboArt CalceFine are therefore the ideal solution for all environments in which the use of natural products is preferred, such as in the restoration of historic buildings or in modern green projects.

CeboArt Stucco - Marmorino

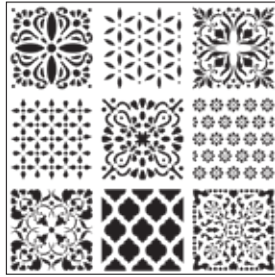

CeboArt Stucco: fine finishing stucco for interiors, based on slaked lime, which naturally guarantees high breathability and resistance to mold and bacteria. CeboArt Stucco allows you to easily create the authentic effect of Venetian Stucco, for decorations with timeless elegance.

CeboArt Marmorino: mineral decorative coating for interiors, based on lime putty and marble dust, which has high breathability and resistance to mold and bacteria. CeboArt Marmorino allows you to create high quality finishes with a delicately marbled and speckled appearance.
